

VIDEO HOSPITAL CONSULTS

To continue to serve our patients in the face of the novel coronavirus (COVID-19) pandemic, we are offering virtual telephone and video consults with our expert hospital staff.

We feel this will provide maximum protection to our staff and patients. It will also allow us to conserve the limited resources of best-practice personal protective equipment and testing kits.

Based on a risk-benefit assessment, consistent with keeping patients and clinicians safe, with preserving hospital workers' availability for the ongoing pandemic, the patient, primary team, and consulting team have agreed to perform this consult through minimal, if any, physical contact, while gaining all available and appropriate data to make clinically appropriate decisions regarding patient care.

You may use your own equipment, such as the phone in your room, a cell phone, an iPad, or a tablet. If you do not have access to a device with a camera, and your doctor needs to do a video visit, we will provide one for you to use during this consult.

Thank you for your cooperation in these most difficult times as we strive to provide you with excellent and safe care. If you have any questions, please contact your nurse or physician.
